

2nd IICL MEMBERS ONLY TRAINING

The IICL has just concluded the 2nd “Members Only” training session in Antwerp, Belgium, last week. The IICL training was designed for non-technical and new staff has been introduced in 2024 to support IICL members’ personnel to advance their knowledge on the operational and technical aspects of containers.

The training starts by addressing the history of containerization from 1956 and subsequent developments through contemporary factory automation tools, design enhancements, the evolution of floorboards, coating systems, regulations, inspection & repair techniques and much more.

The Antwerp 2-day training session on dry van and refrigerated containers took place at depot MEGA who provided the indoor facilities and containers for the daily hands-on field learning.

Similar events are being planned to take place in other locations in 2025.
