

### Refrigerated Container – Equipment Code Standards – “ECS”.

The recently released IICL Preferred ISO 9897/CEDEX codes for Refrigerated Containers also includes a document displaying pictures of components and their respective codes.

Both files are now available for viewing and easy download at:

#### [IICL - CCS & ECS Projects - The Institute of International Container Lessors](#)

During the coming months, IICL members will be working with their depot networks to implement the simplified set of IICL preferred codes and their possible combinations.

The project took approximately 10 months to complete and resulted in a reduction of more than 483.000 possible combinations. As with other code projects, the goal is to facilitate and simplify the process for depot inspectors while obtaining meaningful analytical data to support and manage the equipment at the depots. The IICL – ECS for refrigerated containers covers the box and the machinery.

The IICL expects that during the implementation phase adjustments to the initial set of codes will take place and we will continue to keep users updated on developments.
