

The IICL – Chassis Code Standards is now available

The Institute of International Container Lessors is pleased to announce the release of the Chassis Code Standards – “CCS”. The IICL members have worked on this project for over a year having weekly meetings. The IICL- CCS Preferred codes are based on the ISO 9897/CEDEX codes. The release also includes a document displaying pictures of chassis components and their respective codes.

The main goals of the project were to simplify and standardize codes being used in the container chassis industry while retaining meaningful analytical data to support the development and management of the equipment.

Documents are available for viewing or download at:

[IICL - CCS & ECS Projects - The Institute of International Container Lessors](#)

The IICL expects that during the implementation phase adjustments to the initial set of codes will take place and we will continue to keep users updated on developments.
